DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1 - 6 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 1, L. 1, recites the limitation "type" in "retractor of a type", wherein type is indefinite.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 1 rejected under 35 U.S.C. 102(b) as being anticipated by Lee et al (6,513,747).

Lee et al disclose:

- a pretensioner coupling for a seat belt retractor for a motor vehicle (Fig. 3), the retractor having a belt shaft (120) and a pretensioner drive (200) for winding the belt shaft,
- the pretensioner coupling comprising, a coupling latch (174) movably arranged between a release position and an engagement position, the coupling latch producing a load-transmitting rotational connection between the belt shaft and the pretensioner drive when in the engagement position and movable out of the engagement position and

- into the release position to permit relative rotation between the belt shaft and the pretensioner drive, and
- an inertial mass (210) mounted on the belt shaft and being rotationally arranged in relation to the belt shaft, the coupling latch being coupled with the inertial mass wherein the inertial mass rotates more slowly ("clutch") than the belt shaft upon winding of the belt shaft by the pretensioner drive thereby moving the coupling latch to the engagement position, and wherein the inertial mass rotating faster than the belt shaft at the conclusion of the winding of the belt shaft by the pretensioner drive, moving the coupling latch to the release position

Allowable Subject Matter

Claims 7 – 10 are allowed.

Claim 2 - 6 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims as well as to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Weller (5,931,402) is cited for reference of pretensioner utilizing an inertial mass as a coupling member.
